

Computer Vision II: Recognition

Shenghua Gao

[Email: gaoshh@shanghaitech.edu.cn](mailto:gaoshh@shanghaitech.edu.cn)

Today's Class

- Specifics of this course
- What is Computer Vision?
- What is the applications of computer vision?
- Course Contents.

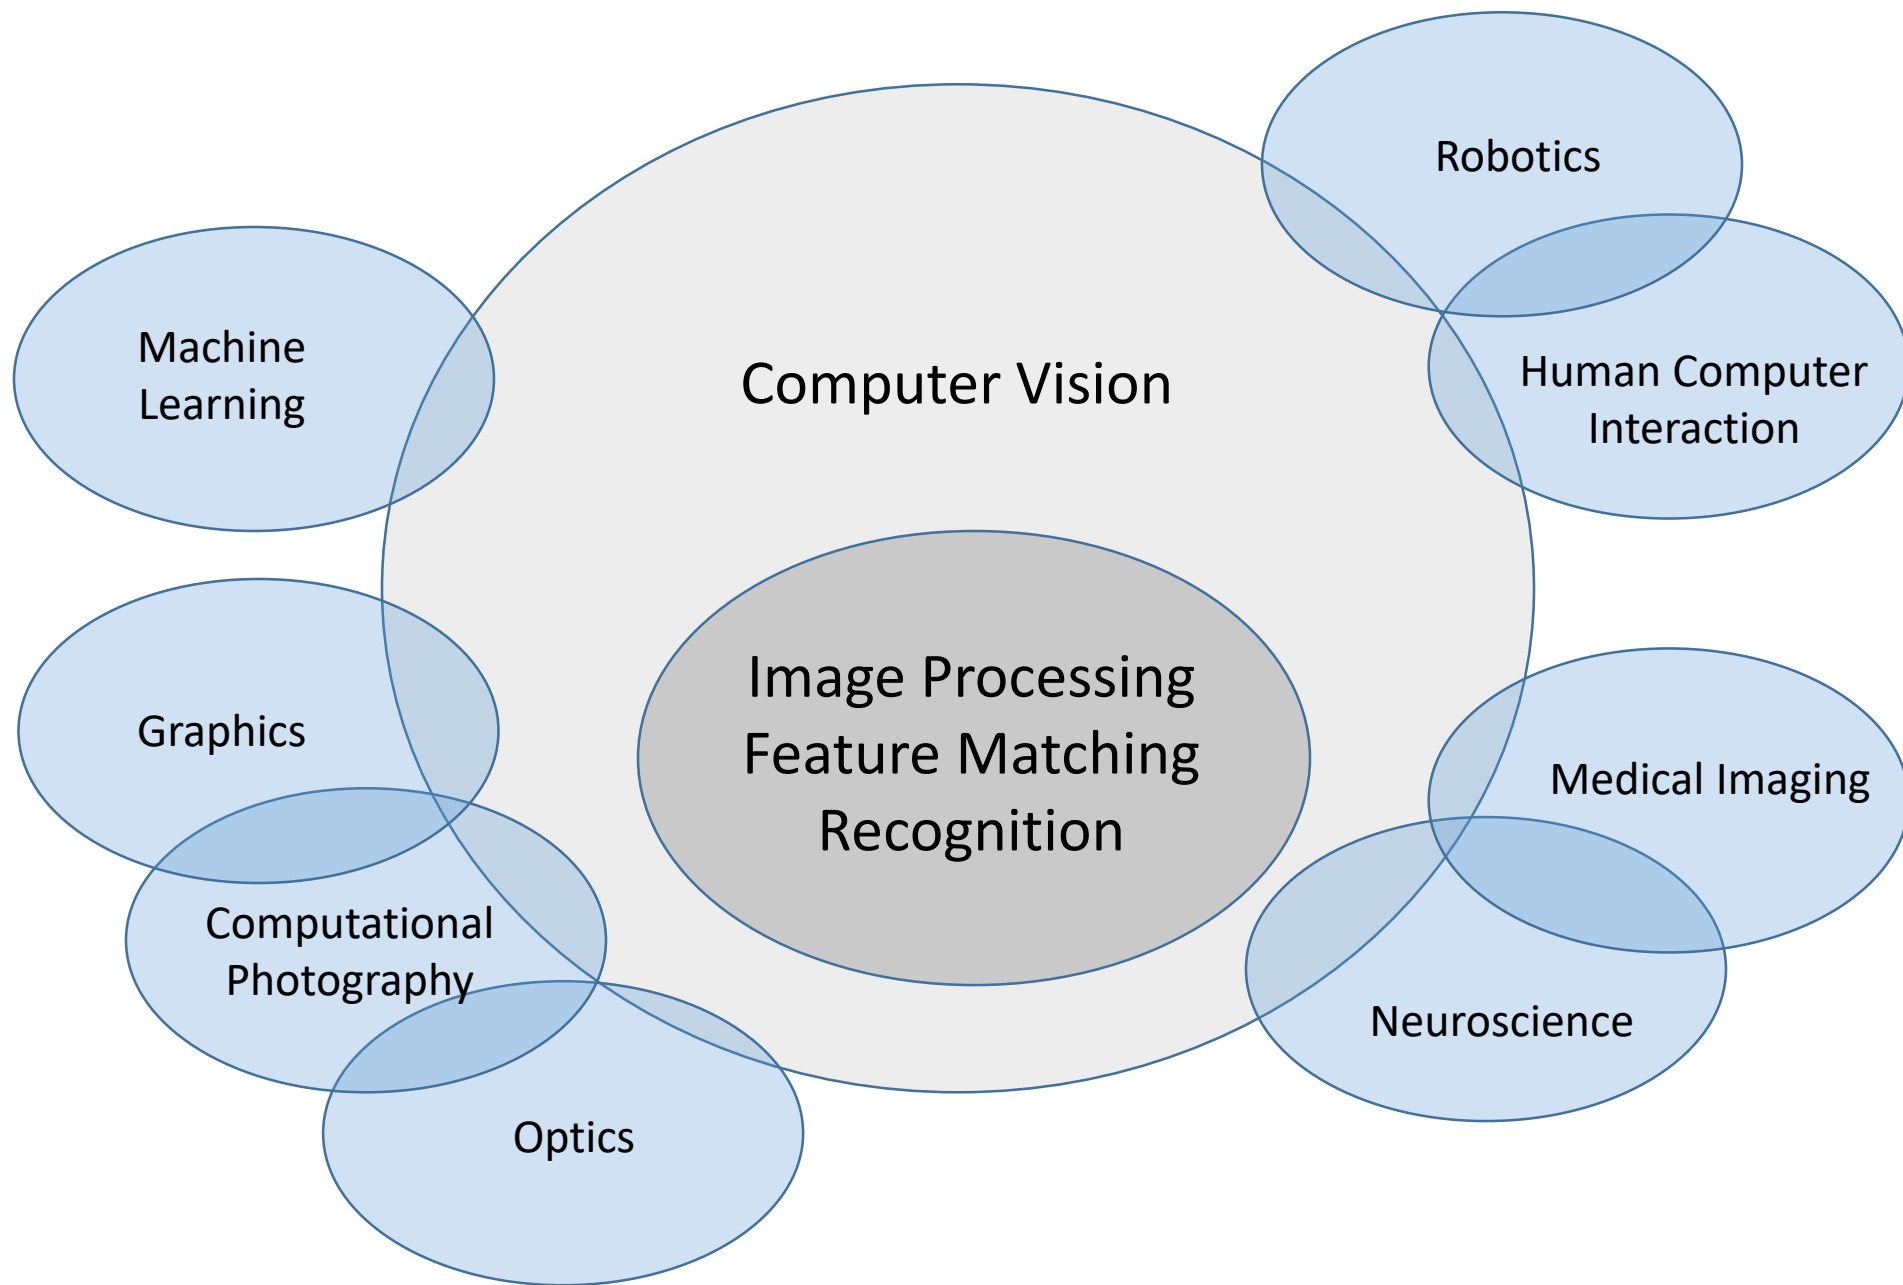

Relationship with several nearby courses

- Computer Graphics: Models to Images
- Computer Vision: Images to Models

Computer vision I: Image formation, 3D reconstruction

Computer vision II: Recognition

Prerequisite courses

I) Digital Image Processing/Computer Vision I (undergraduate courses*)

I) If you have never attended these courses before, I strongly recommend you register the Digital Image Processing course first for graduates..

IV) Programing skills (OpenCV, Matlab, Python)

Course Evaluation

- **Homework (Implement about 5 papers, 20%)** (about 2 weeks per paper*)
 - saliency detection
 - Image Segmentation
 - Image Classification
 - Object Detection
 - Pose estimation
- **上课签到 (course attendance,10%)**
- **Course project (70%).**
 - 每人一个project，独立完成，要有技术创新或者应用创新
 - 提交一个PPT和一个report，report按照ICPR的模板和要求

课件发布：助教发布于
piazza

课程讨论：上课时间微
信群讨论，助教负责课
程的签到

视频上传：学校的网盘

What is Computer Vision?

- What are examples of computer vision being used in the world?

Computer Vision

Make computers understand images and video.

What kind of scene?

Where are the cars?

How far is the building?

...

Vision is really hard

- Vision is an amazing feat of natural intelligence
 - Visual cortex occupies about 50% of Macaque brain
 - More human brain devoted to vision than anything else

Why computer vision matters

Safety

Health

Security

Comfort

Fun

Access

Ridiculously brief history of computer vision

- 1966: Minsky assigns computer vision as an undergrad summer project
- 1960's: interpretation of synthetic worlds
- 1970's: some progress on interpreting selected images
- 1980's: ANNs come and go; shift toward geometry and increased mathematical rigor
- 1990's: face recognition; statistical analysis in vogue
- 2000's: broader recognition; large annotated datasets available; video processing starts
- 2010's: deep learning greatly boosts the performance of computer vision.
- 2030's: robot uprising?

The Applications of Computer Vision

- Optical character recognition
- Face detection
- Image editing
- Medical image analysis

Optical character recognition (OCR)

Technology to convert scanned docs to text

- If you have a scanner, it probably came with OCR software

Digit recognition, AT&T labs

<http://www.research.att.com/~yann/>

License plate readers

http://en.wikipedia.org/wiki/Automatic_number_plate_recognition

车牌识别、银行卡识别等

Face detection

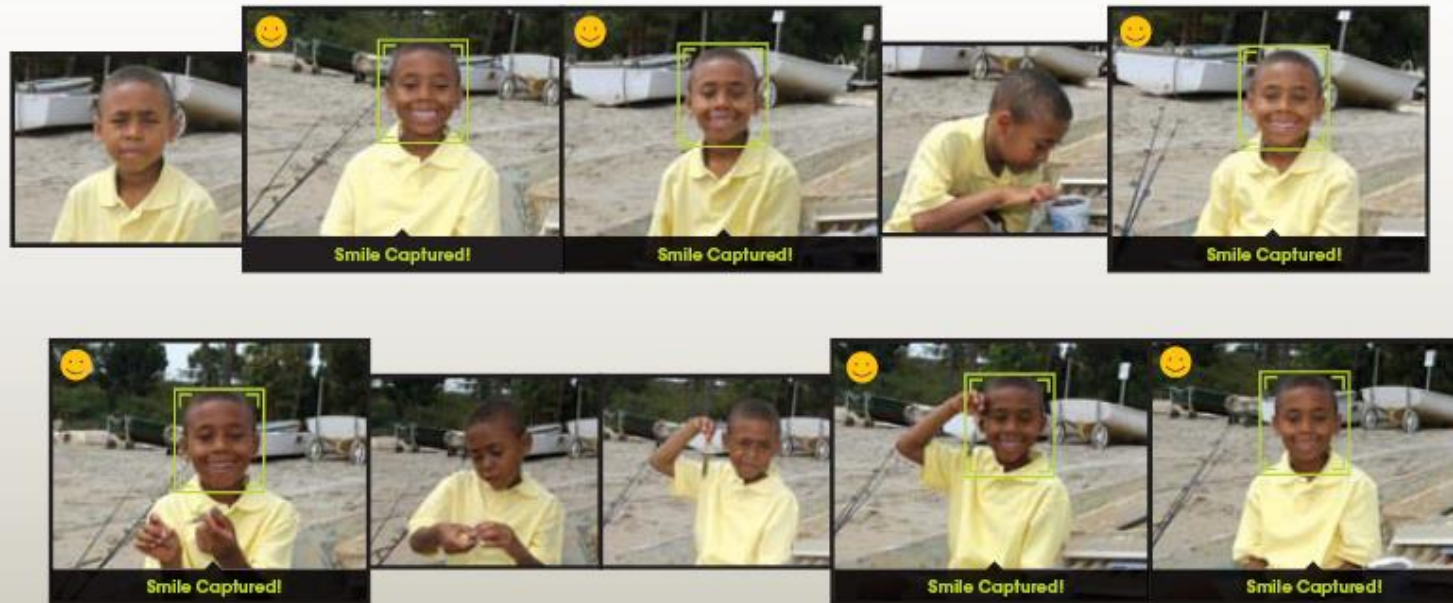

- Many new digital cameras now detect faces
 - Canon, Sony, Fuji, ...

Smile detection

The Smile Shutter flow

Imagine a camera smart enough to catch every smile! In Smile Shutter Mode, your Cyber-shot® camera can automatically trip the shutter at just the right instant to catch the perfect expression.

[Sony Cyber-shot® T70 Digital Still Camera](#)

Face expression transfer

- Face2face technology
- <https://www.youtube.com/watch?v=ohmajJTcpNk>

3D from thousands of images

街景、三维重建

Object recognition (in supermarkets)

[LaneHawk by EvolutionRobotics](#)

“A smart camera is flush-mounted in the checkout lane, continuously watching for items. When an item is detected and recognized, the cashier verifies the quantity of items that were found under the basket, and continues to close the transaction. The item can remain under the basket, and with LaneHawk, you are assured to get paid for it...”

Vision-based biometrics

Vision in space

[NASA'S Mars Exploration Rover Spirit](#) captured this westward view from atop a low plateau where Spirit spent the closing months of 2007.

Vision systems (JPL) used for several tasks

- Panorama stitching
- 3D terrain modeling
- Obstacle detection, position tracking
- For more, read “[Computer Vision on Mars](#)” by Matthies et al.

Industrial robots

Vision-guided robots position nut runners on wheels

Mobile robots

NASA's Mars Spirit Rover

Saxena et al. 2008

[STAIR](#) at Stanford

Medical imaging

3D imaging
MRI, CT

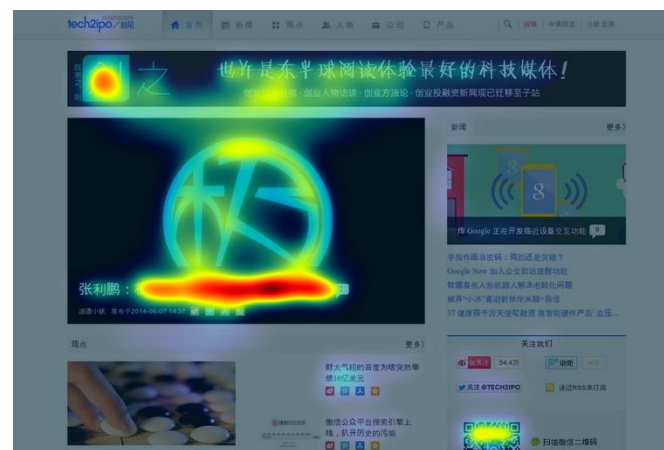

Image guided surgery
[Grimson et al., MIT](#)

皮肤癌检测、心率检测、CT、MRT， PET， 肿瘤检测、蛋白质结构预测、眼病检测等

Course contents

- **saliency detection**
 - unsupervised saliency detection/salient object discovery)
- **segmentation**
 - (unsupervised image segmentation, semantic segmentation)
- **object detection**
 - (face detection/general object detection, supervised methods)
- **object recognition**
 - (face recognition/general image classification, (un)supervised methods)
- **Image generation**
 - Generative adversarial network, style transfer
- **video processing**
 - (tracking/event classification(supervised))

Saliency detection

Application of computer vision

Content based image resizing (Image Retargeting)

<https://www.youtube.com/watch?v=6NclJXTlugc>

Website Design

Image/Video Compression

Image Segmentation

(a) Color Labels (ACA)

(b) Texture Classes

(c) Crude Segmentation

(d) Final Segmentation

Semantic segmentation

Application

Medical Image Analysis: MRI/CT/PET

Image retrieval

Finding Images by Sketching

Object Detection

Object recognition

Face recognition

Face identification

Multiclass
classification

Object Identification

Query

Database Images

Face verification

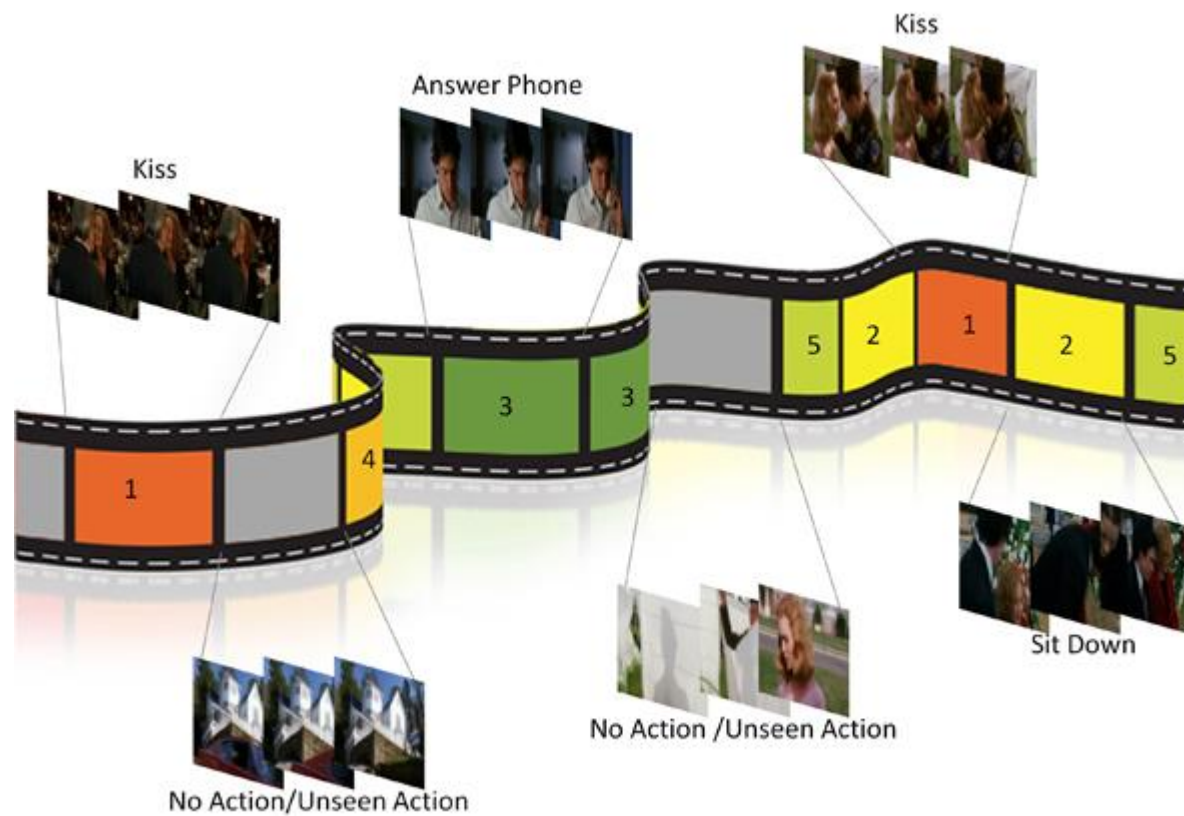

Same person or not.

Binary Result

Generative Adversarial Network

- Face generation
- Style transfer
- Scene generation
- <https://www.youtube.com/watch?v=OGGjXG562WU>

Video Classification
