

# Electromagnetics, Spring 2019

## Homework 7

说明:

全用英文作答;

每道题要对所有小问作答, 要给出全部必要的推导过程, 计算题要算出最终的数值结果, 比如开根号之类的;

所有计算出来的结果如果是有单位的物理量, 一定要写明单位;

每题的分数在括号中给出;

可以互相讨论, 也可以上网查, 但是不能抄袭, 也不能找别人代做;

所有的解答必须全部是手写的原件, 不接受扫描件与照片;

有问题就给我发邮件;

4 月 28 日星期日 **上课之前** 交, 如到时未完成, 可以 4 月 30 日星期二 **上课之前** 交, 但是分数会减去 20%。

第一部分 In textbook book *Fundamentals of Applied Electromagnetics*, 7<sup>th</sup> edition

8.9 (100 points) You need to first do it using the infinite reflection method. Then do it again by assuming all the waves in the medium 2 can be classified to  $Ae^{-jk_2z}$  and  $Be^{jk_2z}$ .

8.16 (20 points)

8.16 (20 points)

8.22 (20 points)

8.30 (20 points)

8.36 (50 points)

第二部分 Homemade

1. (80 points) A plane wave is normally incident on a dielectric slab of permittivity  $\epsilon_r$  and thickness  $d$ , where  $d = \lambda_0/(4\sqrt{\epsilon_r})$  and  $\lambda_0$  is the free-space wavelength of the incident wave, as shown in the accompanying figure. If free-space exists on both sides of the slab, find the reflection coefficient of the wave reflected from the front of the slab. Then try it again using  $d = \lambda_0/(2\sqrt{\epsilon_r})$ .
