Dear Class,

For EE 115B, I am aware that some of you have experienced difficulty installing the 2021.1 edition of Vivado as it requires about 100 G of disk space. Our TAs have tested another three editions: 2016.2, 2018.1, and 2019.2, which needs about 54, 24, and 33 G, respectively. You may pick one of them or try some other editions from Xilinx if the 2021.1 edition does not work for you. If you still have problems installing the software, please notify Shijie Xu by next Thursday, Nov. 18. We will work out other solutions in that case.

Thanks,

Hengzhao Yang
